

My Recipe Book

A Simple Recipe Website Using HTML, CSS & JavaScript

Presented by: Pankaj Kumar , Lucky Singh , Rajvir Singh , Prince Kumar
Class : Btech cse 3 sem ,Section 25

Problem Identified

1

Scattered recipes

Recipes are spread across videos, blogs and notebooks, so finding one takes time.

2

Cluttered websites

Many recipe sites are full of ads and long stories before the actual recipe.

3

No quick search

Users cannot instantly search by name or filter by Breakfast, Lunch or Dinner.

4

Hard to follow

Ingredients and steps are buried in long pages, making them hard to read quickly.

Proposed Solution

A simple, responsive recipe website that puts every recipe one click away.

1

Live Search

Type a name and the cards filter instantly.

2

Category Filter

One click for All, Breakfast, Lunch, Dinner or Dessert.

3

Recipe Popup

View Recipe opens ingredients and steps in a clean modal.

4

Responsive Layout

CSS Grid adapts cards to mobile, tablet and desktop.

Methodology

1

Requirement Analysis

Identified the problem and listed features: search, filter, popup.

2

Design

Planned the layout, card style and the orange-cream colour scheme.

3

Development

Built structure with HTML, styling with CSS, logic with JavaScript.

4

Testing

Checked search, filters, popups and screen sizes in the browser.

5

Review & Improve

Fixed issues and listed future additions like favorites and ratings.

Approach: plan first, build in small parts, test after each part.

1. Project Overview

- A simple and responsive recipe website for browsing recipes.
- Users can search for recipes and filter them by category.
- Each recipe has a View Recipe button that opens a popup.
- The project uses only front-end technologies: HTML, CSS and JavaScript.

HTML
Structure

CSS
Design

JavaScript
Interaction

2. Technologies Used

A solid orange circle with the text "HTML" in white, sans-serif font in the center.

HTML

Creates the page structure: header, search bar, categories, recipe cards and modal.

A solid green circle with the text "CSS" in white, sans-serif font in the center.

CSS

Adds colors, spacing, responsive cards, buttons, hover effects and popup styling.

A solid orange circle with the text "JavaScript" in white, sans-serif font in the center.

JavaScript

Handles searching, category filtering and displaying recipe details dynamically.

3. HTML — Page Structure

Main HTML structure

```
<header>
  <h1>🍳 My Recipe Book</h1>
  <p>Simple and delicious recipes</p>
  <input id="searchInput"
        placeholder="Search recipes...">
</header>

<div class="categories">
  <button onclick="filterRecipes('all')">All</button>
  <button onclick="filterRecipes('breakfast')">Breakfast</button>
  <button onclick="filterRecipes('lunch')">Lunch</button>
  <button onclick="filterRecipes('dinner')">Dinner</button>
</div>

<section id="recipeContainer" class="recipe-container">
  <div class="recipe-card" data-category="breakfast">
    
    <h2>Fluffy Pancakes</h2>
    <button onclick="showRecipe('pancakes')">
      View Recipe
    </button>
  </div>
</section>
```

- <header> contains the title and search bar.
- Category buttons call JavaScript functions.
- Recipe cards store the category in data-category.
- View Recipe buttons open the recipe details.

4. CSS — Styling & Layout

Key CSS

```
body {
  font-family: Arial, sans-serif;
  background: #fff8f0;
  color: #333;
}

header {
  text-align: center;
  padding: 50px 20px;
  background: #ff7043;
  color: white;
}

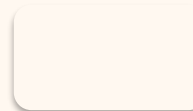

.recipe-container {
  display: grid;
  grid-template-columns:
    repeat(auto-fit, minmax(280px, 1fr));
  gap: 25px;
}

.recipe-card {
  background: white;
  border-radius: 15px;
  border: 1px solid #f0dfd0;
  box-shadow: 0 5px 15px
    rgba(100, 70, 40, 0.08);
}
```

Color Scheme

Orange #ff7043

Cream #fff8f0

Green #66a86b

Dark Orange #e85d35

5. JavaScript— Interactivity

Recipe popup

```
function showRecipe(recipeName) {
  const recipe = recipes[recipeName];

  document.getElementById("modalTitle")
    .textContent = recipe.title;

  const list = document.getElementById("ingredients");
  list.innerHTML = "";

  recipe.ingredients.forEach(function(item) {
    const li = document.createElement("li");
    li.textContent = item;
    list.appendChild(li);
  });

  document.getElementById("instructions")
    .textContent = recipe.instructions;

  document.getElementById("recipeModal")
    .style.display = "flex";
}

function closeRecipe() {
  document.getElementById("recipeModal")
    .style.display = "none";
}
```

Search function

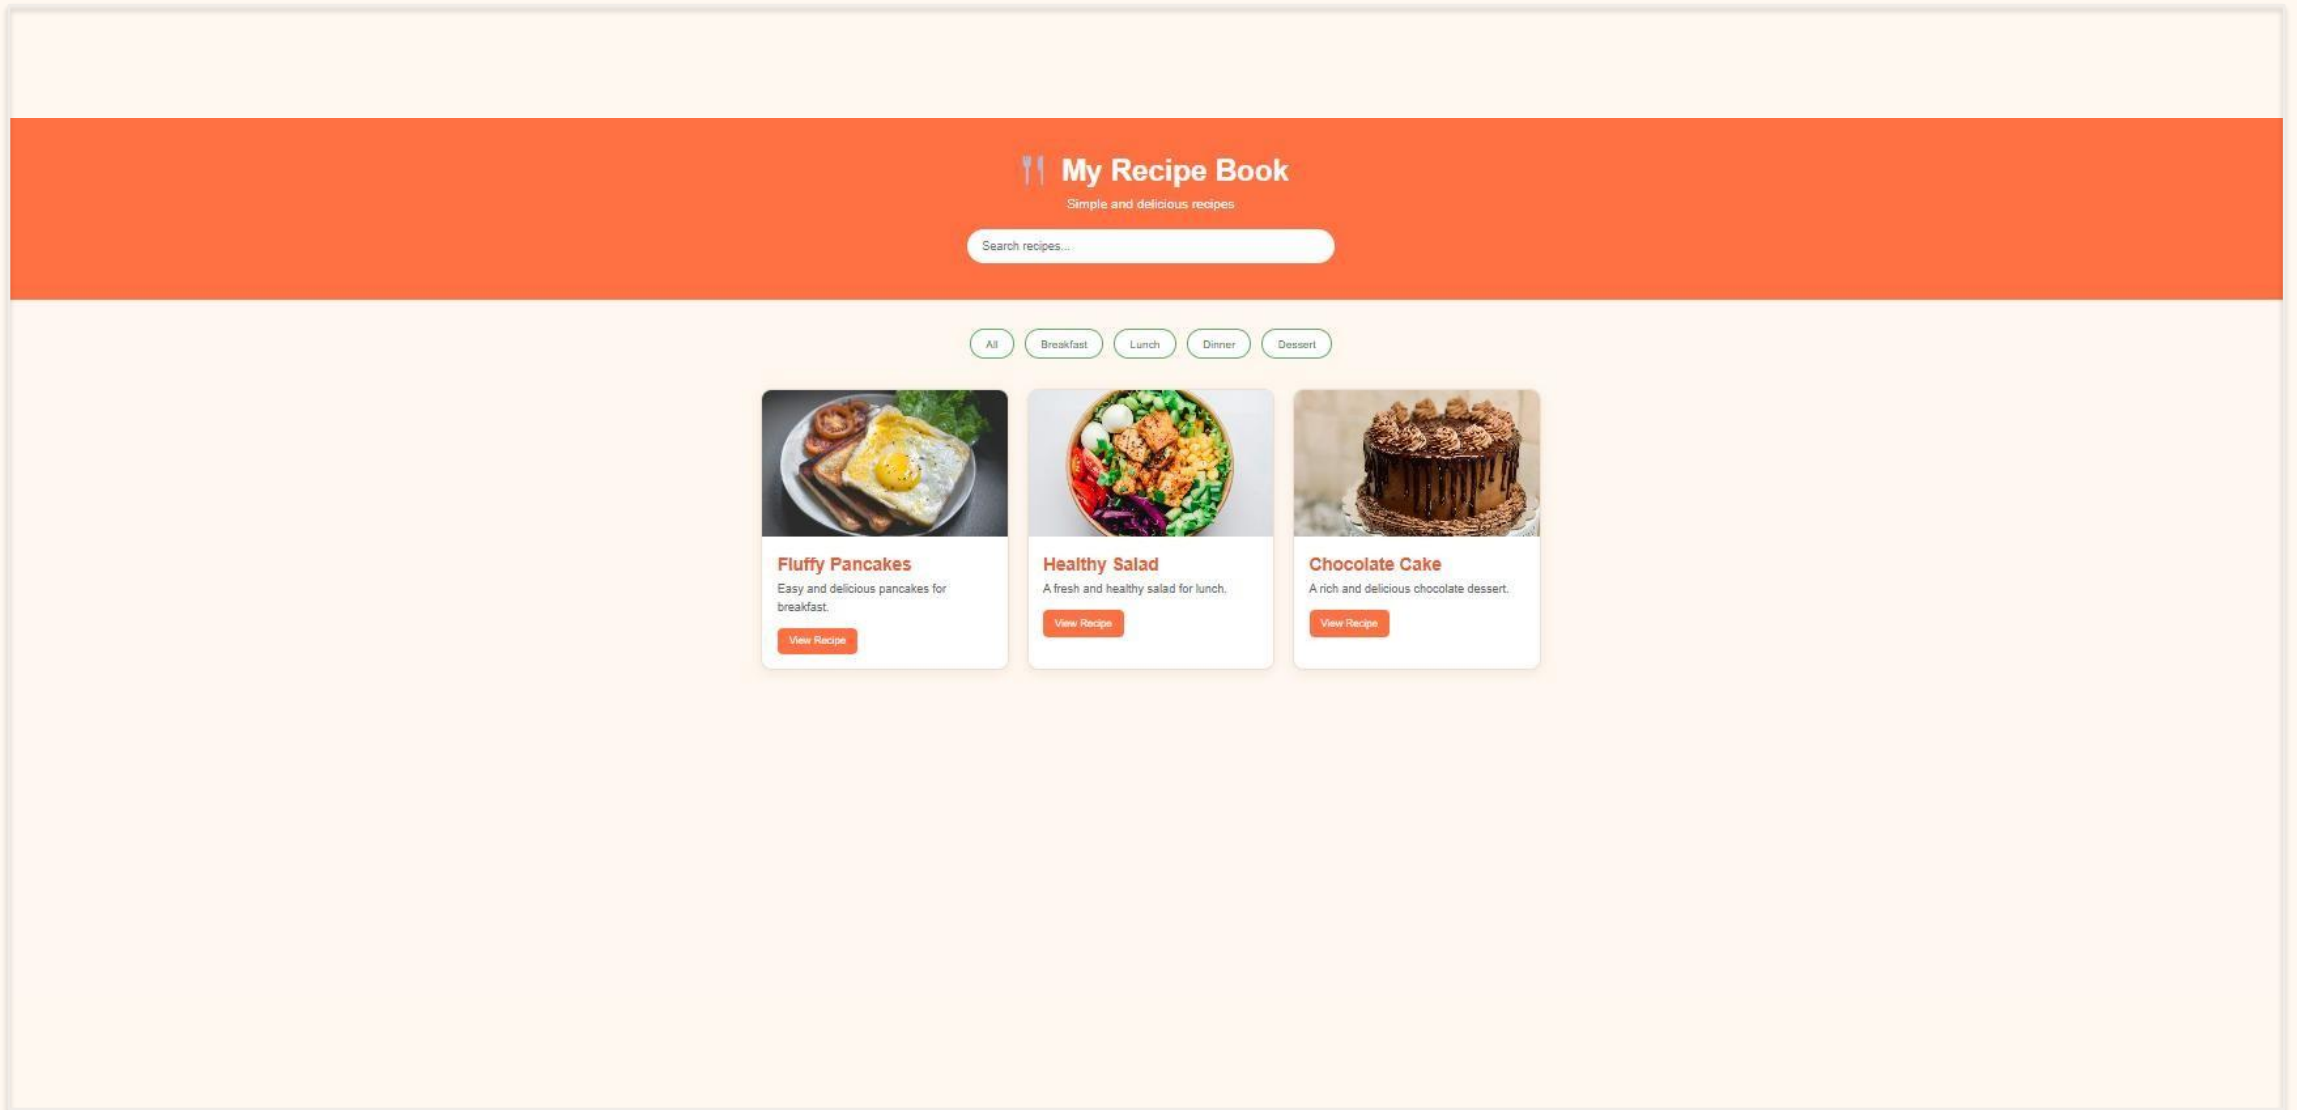

```
document.getElementById("searchInput")
  .addEventListener("input", function() {
    const searchText = this.value.toLowerCase();
    const cards = document.querySelectorAll(".recipe-card");

    cards.forEach(function(card) {
      const title = card.querySelector("h2")
        .textContent.toLowerCase();

      card.style.display =
        title.includes(searchText) ? "block" : "none";
    });
  });
```

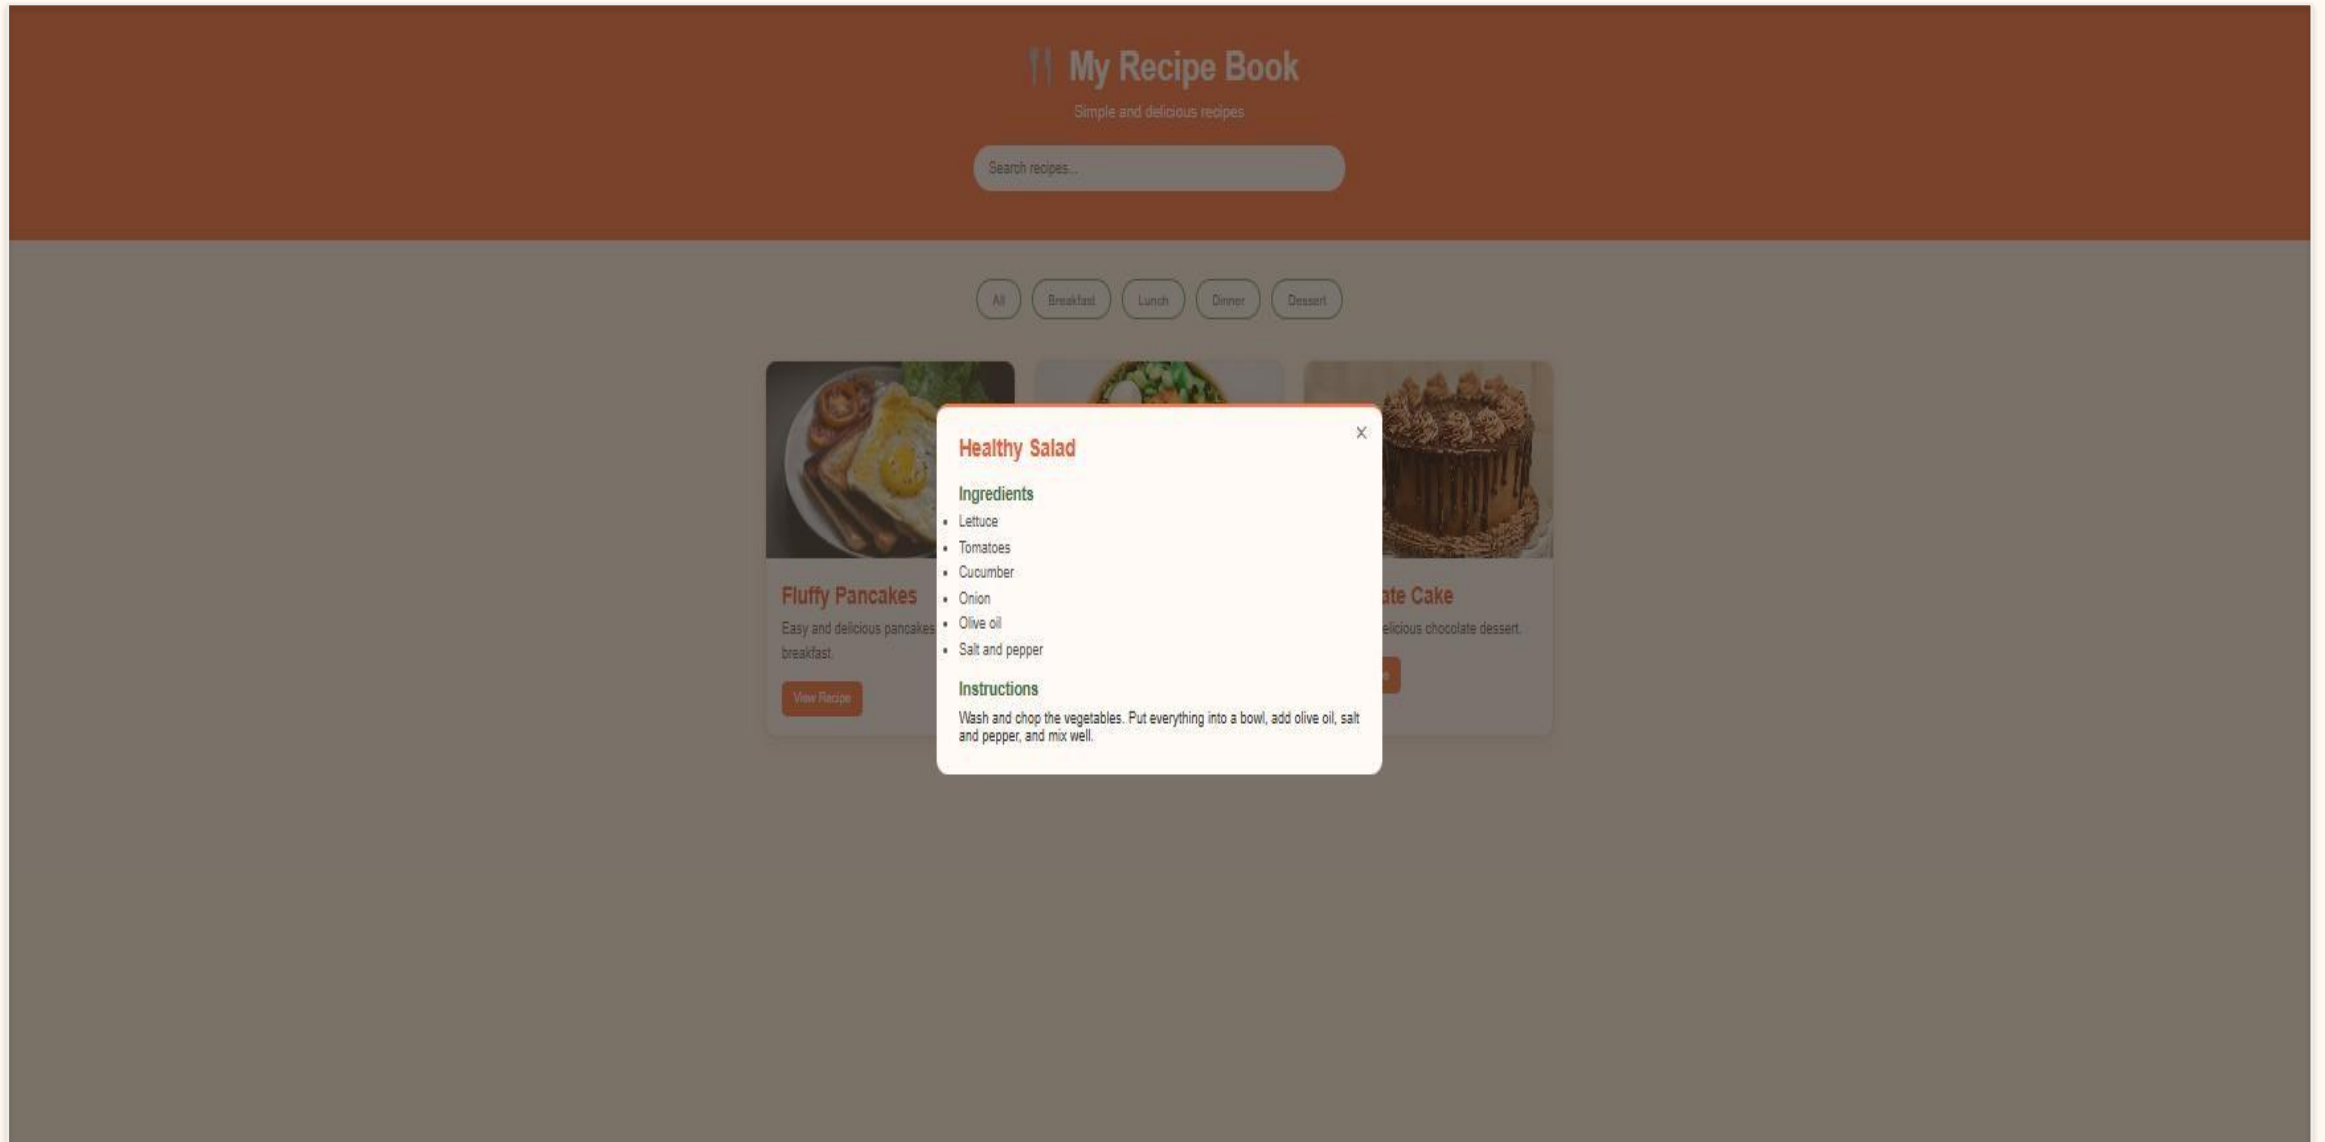

- JavaScript reads the selected recipe.
- Ingredients are inserted into the popup dynamically.
- The search input filters cards while the user types.
- Category buttons use the same idea to show or hide cards.

6. Website Result — Main Page

Home page with search, category filters and three recipe cards.

8. Website Result — Healthy Salad Recipe

My Recipe Book

Simple and delicious recipes

[All](#)[Breakfast](#)[Lunch](#)[Dinner](#)[Dessert](#)

Fluffy Pancakes

Easy and delicious pancakes for breakfast.

[View Recipe](#)

Chocolate Cake

Delicious chocolate dessert.

[View Recipe](#)

Chocolate Cake

Ingredients

- 1 cup flour
- 1 cup sugar
- 1/2 cup cocoa powder
- 2 eggs
- 1/2 cup milk
- 1 teaspoon baking powder

Instructions

Mix the dry ingredients together. Add eggs and milk and mix well. Pour into a baking pan and bake at 180°C for about 30 minutes.

8. How the Website Works

1

HTML

Creates the content and recipe cards.

2

CSS

Controls colors, layout, spacing and appearance.

3

JavaScript

Responds to clicks and typing.

4

Browser

Combines all three to display the final website.

Problem vs Solution

Problem	Solution in My Recipe Book
Recipes are hard to find	Search bar filters recipe cards as you type
Too many unrelated recipes	Category buttons show only the chosen meal type
Cluttered, long pages	Clean cards with one View Recipe button
Hard to read steps	Popup lists ingredients and instructions clearly
Different screen sizes	Responsive CSS Grid layout

9. Conclusion

- The project demonstrates how HTML, CSS and JavaScript work together.
- The interface is simple, colorful and easy to navigate.
- JavaScript makes the website interactive through search, filters and recipe popups.
- Possible future additions: more recipes, favorites, ratings and a database.
